Computer Vision HW2 Report

Student ID: R10943117
Name: 陳昱仁

Part 1. (10%)

• Plot confusion matrix of two settings. (i.e. Bag of sift and tiny image representation) (5%)

Ans:

Settings	Confusion matrix
Tiny image	Bag of sift	
• Compare the results/accuracy of both settings and explain the result. (5%)

Ans:

Settings	Accuracy
Tiny image	22.53%
Bag of sift	61.13%

Tiny image 只是將圖片縮小並拿 pixel 值來當 features，準確率不高，bags of sift 中間通過 SIFT 抽取 features，最後 knn 用來比較的 feature 是每張圖的 vocabulary 分布，自然比沒特別處理圖片的 tiny image 還來的高。

Part 2. (35%)

• Compare the performance on residual networks and LeNet. Plot the learning curve (loss and accuracy) on both training and validation sets for both 2 schemes. 8 plots in total. (20%)

Ans:

在 testing 上，訓練 15 個 epochs，LeNet 準確率 51.2%，Resnext50 可達 79.42%，可看出 residuel block 的強力之處，下方 loss 及 acc 圖也可看出 resnext50 皆優於 LeNet。

Model	LeNet	Resnext50
Train loss		Train acc		Val loss		Val acc		
• Attach basic information of the model you use including model architecture and number of the parameters. (5%)

Ans:

使用 resnext50_32x4d 的 model，參數總共有 23000394 個，架構如下。

```
(model): ResNet(
  (conv1): Conv2d(3, 64, kernel_size=(7, 7), stride=(2, 2), padding=(3, 3), bias=False)
  (bn1): BatchNorm2d(64, eps=1e-05, momentum=0.1, affine=True, track_running_stats=True)
  (relu): ReLU(inplace=True)
  (maxpool): MaxPool2d(kernel_size=3, stride=2, padding=1, dilation=1, ceil_mode=False)
  (layer1): Sequential(
    (0): Bottleneck(
      (conv1): Conv2d(64, 128, kernel_size=(1, 1), stride=(1, 1), bias=False)
      (bn1): BatchNorm2d(128, eps=1e-05, momentum=0.1, affine=True, track_running_stats=True)

```

• Briefly describe what method do you apply? (e.g. data augmentation, model architecture, loss function, semi-supervised etc.) (10%)

Ans:

除了 dataset 有簡單的旋轉翻轉，使用強力的 model resnext50，train 15 個 epochs 即可通過。
